PROFESSIONAL SUMMARY

Full-Stack Developer who ships web applications end to end, from component-driven React/Next.js frontends to NestJS REST APIs, PostgreSQL databases, and Dockerized deployments. Built a torrent-based video streaming platform solo, co-founded Chatlilo and built its entire UI, and delivered secure authentication and real-time features in team projects at 1337 (42 Network). Looking for a full-stack or frontend role where I can own features from design to production.

EXPERIENCE

Frontend Developer & Co-Founder — Chatlilo (May 2025 – Dec 2025)

Stack: *Next.js, React, TypeScript, Redux Toolkit, Tailwind CSS, Shadcn/UI, REST APIs, Git*

- Designed and built the platform's full UI as sole frontend developer, delivering a design system and a library of 20+ reusable React components that shortened feature delivery for the team.
- Eliminated redundant API calls and improved UI responsiveness by managing complex client-side state with Redux Toolkit.
- Integrated REST APIs across all major user flows, covering authentication, data fetching, and error handling end to end.
- Shipped features iteratively in a startup environment using Git branching, code reviews, and fast feedback cycles.

PROJECTS

Hypertube — Video Streaming Web Platform | GitHub

Stack: *Next.js 15, React, TypeScript, NestJS, TypeORM, PostgreSQL, Passport, JWT, Nodemailer, TMDb API, Docker Compose*

- Built the entire platform solo, from the database and REST API to the responsive frontend, for streaming videos from torrents directly in the browser.
- Delivered playback that starts while the file is still downloading, by running the torrent download on the server in the background without blocking requests, and converting unsupported formats on the fly to browser-compatible ones.
- Built a searchable video library that queries Archive.org and a second royalty-free source, with infinite-scroll pagination, sorting and filtering, and watched/unwatched indicators.
- Enriched each title with cover, year, rating, cast, and summary from the TMDb API, and added subtitle support plus per-video comments.
- Implemented 2 OAuth sign-in strategies (42 and Google) alongside username/password login, using JWT access and refresh tokens.
- Protected user accounts with bcryptjs password hashing, plus email verification and password reset built on SHA-256-hashed one-time tokens and SMTP delivery (Nodemailer, Brevo).
- Exposed a RESTful API for users, movies, and comments, secured with OAuth2 and ownership checks that return the appropriate HTTP status codes.
- Automated cleanup of videos unwatched for a month to control server storage, and maintained a unit and end-to-end test suite throughout.

TaskFlow — Full-Stack Project Management Platform | GitHub

Stack: *Next.js 15, React, TypeScript, Tailwind CSS, Shadcn/UI, TanStack Query, NestJS, TypeORM, PostgreSQL, JWT, Swagger, Docker*

- Built a Jira/Linear-inspired task manager end to end, covering the frontend, REST API, database schema, and containerized deployment.
- Secured the platform with JWT authentication, protected routes, and role-based access control.
- Delivered a Kanban dashboard with project analytics, task statuses, priorities, and due dates across multiple projects.
- Enabled team collaboration through member invitations, permission-based access, and shared project workspaces.
- Kept the UI in sync with the server and cut unnecessary re-fetches by managing all server state with TanStack Query.
- Documented the full API with Swagger and enforced data integrity through DTO validation and TypeORM relations.
- Enabled one-command setup for development and deployment by containerizing the stack with Docker Compose.

Multiplayer Pong Platform | GitHub

Stack: *Next.js, React, TypeScript, Tailwind CSS, NestJS, Django, PostgreSQL, WebSockets, Docker*

- Led the frontend of a full-stack multiplayer Pong SPA in a 5-person team, owning component architecture, routing, and state management.
- Implemented OAuth login and JWT-based two-factor authentication (2FA) on the client side.
- Delivered real-time gameplay, in-app chat, and friend management over persistent WebSocket connections.
- Contributed to the tournament system, including matchmaking, player registration, and a live stats dashboard.
- Collaborated through Git branching, pull requests, and regular code reviews.

Cloud-1 — Cloud Infrastructure & Deployment | GitHub

Stack: *Linux, Docker, AWS, Bash, Ansible, Nginx*

- Deployed a multi-service web infrastructure on AWS from scratch, running each service as a Docker container.
- Automated server provisioning and deployment with Bash scripts and Ansible playbooks, removing manual setup steps.
- Secured the infrastructure with HTTPS, firewall rules, an Nginx reverse proxy, and environment-based secrets management.

BetaHiring AI — AI-Powered Recruitment Platform | GitHub

Stack: *Next.js, React, TypeScript, Tailwind CSS, AI APIs, REST APIs*

- Owned the full frontend of an AI-driven recruitment platform, from UI architecture to API integration.
- Surfaced AI-generated hiring insights in a fast, responsive interface by integrating AI and REST APIs.
- Turned product requirements into an accessible, polished UI focused on usability and performance.

TECHNICAL SKILLS

Frontend: Next.js, React, TypeScript, JavaScript (ES6+), Redux Toolkit, TanStack Query, Tailwind CSS, Shadcn/UI, HTML, CSS

Backend: NestJS, Node.js, REST APIs, TypeORM, PostgreSQL, JWT, OAuth 2.0, Passport, Swagger, WebSockets

DevOps & Cloud: Docker, Docker Compose, Linux, Bash, Ansible, AWS, Nginx

Languages: TypeScript, JavaScript, C, C++, Bash

Mobile: React Native (fundamentals)

Tools: Git, GitHub

EDUCATION

1337 Khouribga Coding School (42 Network) — Software Engineering *(2022 – Present, final year)*
Project-based, peer-to-peer curriculum focused on software engineering, systems programming, and web development.

LANGUAGES

Arabic (Native) · French (Fluent) · English (Professional)
